

## Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is a hydraulic apparatus that could allow the the one driving to work the lift truck without leaving the seat. They are made out of high quality materials and are meant to endure the most challenging procedures and work environments. Side shifting models have the added ability to laterally position the entire load or the arms so as to facilitate more exact carrying and placement in a quicker and more efficient way.

The only one of its kind fork pocket design could enable the person operating it to be able to safely swing the unit's forks without any fear of destroying the positioning cylinders. This could allow the operator the option to either perform independent or simultaneous blade movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages can be converted into fork positioners on available units.
