

## Remanufactured Lift Truck Parts

Remanufactured Forklift Parts - Forklifts are very expensive pieces of machines. A five thousand pound new electric model can cost between \$18,000 to \$25,000 and a few thousands of dollars more would be needed for a battery and a battery charger. The same internal combustion lift truck of the same lift capacity would cost a little less and the diesel models that are capable of heavier lifting capacities could cost upwards of one hundred thousand dollars. Reconditioned forklifts are an alternative to be able to save much money since they cost less than half the price of new units.

Some people think they would deal with more maintenance issues if they acquire a reconditioned lift truck and are apprehensive of buying a second-hand lift truck at a sale price. A properly reconditioned forklift would work just along with a brand new one and any worries of repairs are unfounded. Even though your lift will get heavy use, as long as you take good care of the equipment, it will serve all your needs and potentially save you lots of cash.

When thinking about acquiring a used forklift, it is vital to determine what the seller means by the term refurbished or reconditioned. A lot of companies do an excellent job of completely making over the unit previous to reselling it. This comprises disassembling the forklift, rebuilding the engine, sandblasting the lift and after that reassembling the whole thing and finishing with a fresh coat of paint.

To correctly and meticulously rebuild a forklift engine, a good company would totally disassemble it. A heat cleaning system could then be used to clean all the components. As soon as this step has been finished, all of the components are checked to see if they have any extensive wear, any defects or breakage. Some components such as cylinder blocks, connecting blocks, cylinder heads and crankshafts are reground, resurfaced and resized if considered necessary. Several components like bolts, gears, nuts and all that. are repaired or replaced as needed.

The engine is rebuilt by hand once the overhaul has been accomplished. After putting it back together, a series of tests are applied to the running machine. This is done to be able to check all of the components to ensure there are no issues or leaks. If any problems occur, the necessary changes are done.

There must be no reason to be worried about obtaining a reconditioned or refurbished lift truck from quality sellers. The process of rebuilding the machines ensures the utmost in reliability. Upkeep costs could truly work out to be less for the reason that you would avoid the initial phase of higher maintenance projections which a brand new forklift has as it is broken in. By following routine upkeep schedules and taking care of the equipment properly, a reconditioned lift truck will serve you well.
